## FEED ADDITIVE

### The Fermacto® Dozen

Fermacto is *Aspergillus* Meal. The dried mycelium of the *Aspergillus* sp. supports the bacteria and allows it to propagate, producing increased levels of short chained organic acids, shown to inhibit the growth of pathogenic bacteria, creating a prebiotic environment that promotes early intestinal maturity and leads to improved

Productivity and Uniformity. Call for a sample or your nearest dealer.

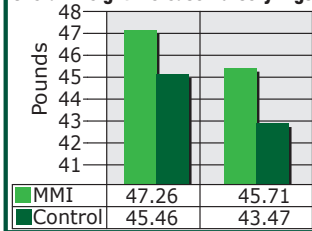

#### Pet-Ag Inc.

255 Keyes Ave., Hampshire, IL 60140  
(847) 683-0458 and (800) 323-6878  
www.petag.com

One of the most common problems with feed quality today is the accumulation of moisture in the grain during harvesting, processing, and storage. A high moisture level is the main cause of the development of harmful molds, bacteria and fungus in feed. Some molds can produce metabolites or mycotoxins. Therefore, the use of **MMi** produces safer feed. The use of **MMi** has shown improved reproduction, increased feed efficiency, and more milk production. **MMi** was developed by the same company that produces *Mistral*.

## Only The Best Feed Manufacturers Survive

Managing feed cost is important to your customers, but high feed quality is even more essential.

Let the experts in feed binder technology ensure that your feed is the highest quality possible.

- ◇ Low Inclusion Rate
- ◇ Minimal Fines
- ◇ No Caking

**Low cost is no longer  
good enough.**
