

B Byproducts & Unusual Feedstuffs

By JOHN C. WALLER

Waller is a beef cattle nutritionist, University of Tennessee.

Feeding programs often include byproducts and unusual feedstuffs to provide key nutrients to animals. The data presented in the Table should be considered as a guide to nutrient content rather than a precise statement of nutrient composition. Because many of the feedstuffs are byproducts, they are, by the nature of their origin, often subject to variation in composition. Other factors that contribute to the wide variation in nutrient composition of these feedstuffs are growing conditions, harvest conditions, post harvest processing, storage and handling.

The following abbreviations are used in the Table: ADF is acid detergent fiber; Ca is calcium; CF is crude fiber; CP is crude protein; DE is digestible energy; DM is dry matter; EE is ether extract (crude fat); K is potassium; Mcal is megacalorie; Mech-extd is mechanically extracted; Mg is magnesium; NEg is net energy for gain; NEI is net energy for lactation; NEm is net energy for maintenance; NFE is nitrogen-free ex-

tract; P is phosphorus; Solv-extd is solvent extracted, and TDN is total digestible nutrients. A dash indicates there is no information available.

Energy values marked with an asterisk in the table were calculated from chemical analysis data when actual energy values were not available from digestion trials. The values were then reduced 10% to provide a safety factor when using them for ration formulation. The following formulas were used (all constituents on a DM basis):

$$(1) \%TDN = 1.15 \text{ CP\%} + 1.75 \text{ EE\%} + 0.45 \text{ CF\%} + 0.0085 \text{ NFE\%}^2 + 0.25 \text{ NFE\%} - 3.4.$$

$$(2) \text{ NEI (Mcal/lb.)} = (0.0245 \text{ TDN\%} - 0.12) * 0.4536.$$

$$(3) \text{ DE (Mcal/lb.)} = 0.0229 \text{ CP\%} + 0.0349 \text{ EE\%} + 0.0091 \text{ CF\%} + 0.00017 \text{ NFE\%}^2 + 0.005 \text{ NFE\%} - 0.068.$$

$$(4) \text{ NEm (Mcal/lb.)} = 0.655 \text{ DE (Mcal/lb.)} - 0.185$$

$$(5) \text{ NEg (Mcal/lb.)} = 0.815 \text{ DE (Mcal/lb.)} - 0.0497 \text{ DE (Mcal/lb.)} - 0.625.$$

Several items listed in this Table have been included in the Nutrient Requirements of Dairy Cattle, seventh revised edition (2001) and in the Nutrient Requirements of Beef Cattle, update (2000). Both of these references include estimates for soluble nitrogen, rumen degradable protein, rumen undegradable protein, amino acids, minerals and vitamins.

Byproducts and unusual feedstuffs
